

As a long haul trucker I find XM Radio traffic and weather conditions in various metropolitan areas to be a safety factor in my decisions as to when I should drive into those areas. Out on the road I cannot obtain local traffic due to distances, but with XM I can hear local conditions from hundreds of miles away and can then make my decision as to when I should attempt to drive into that area. Also knowing real time weather down the road is without a doubt a major safety factor as to if I should stop or continue. Please do not allow the NAB to stop this valuable service that satellite radio provides.
